# From Data Overload to Clear Insight

## — ai.go connects knowledge, automates processes, accelerates your business

*ai.go* is not just another Large Language Model. It's an autonomous, multifunctional AI agent system built for businesses. It helps you harness your data, make knowledge instantly accessible, and shape intelligent workflows — all through a simple chat interface.

Your teams can

- ⬠ Ask questions and get instant, precise answers
- ⬠ Analyze data in seconds
- ⬠ Automate repetitive tasks effortlessly
- ⬠ Delegate entire workflows directly to AI

Why *ai.go* makes the difference

- ⬠ Dynamically scalable — New AI agent roles are created automatically as needs arise
- ⬠ Future-ready — Grows and adapts with your business
- ⬠ Invisible efficiency — Everything runs in the background; you see only fast, accurate results
- ⬠ Effortless complexity — Handles even the toughest requests without extra workload for your people

### Collaboration with AI — built into your daily workflow

Behind *ai.go* is a team of specialized AI agents working together like a seasoned task force. They tap into your internal knowledge and external sources — and put the right information in your hands, exactly when you need it.

### Faster access to what matters

*ai.go* pulls data from multiple systems, connects it, and presents it clearly — so your teams can navigate complex topics without losing focus.

### Break silos. Connect knowledge. Unlock insights

*ai.go* analyzes, links, and interprets information from sources that were once isolated. It uncovers hidden connections, opening up fresh perspectives and solid decision-making foundations — all without extra manual effort.

### From idea to execution — no coding required

With *ai.go*, your people can design and launch solutions on their own — fast, on-demand, and without programming skills.

Routine tasks? Automated.

Workload? Reduced.

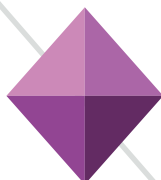

Time? Freed for what truly matters.

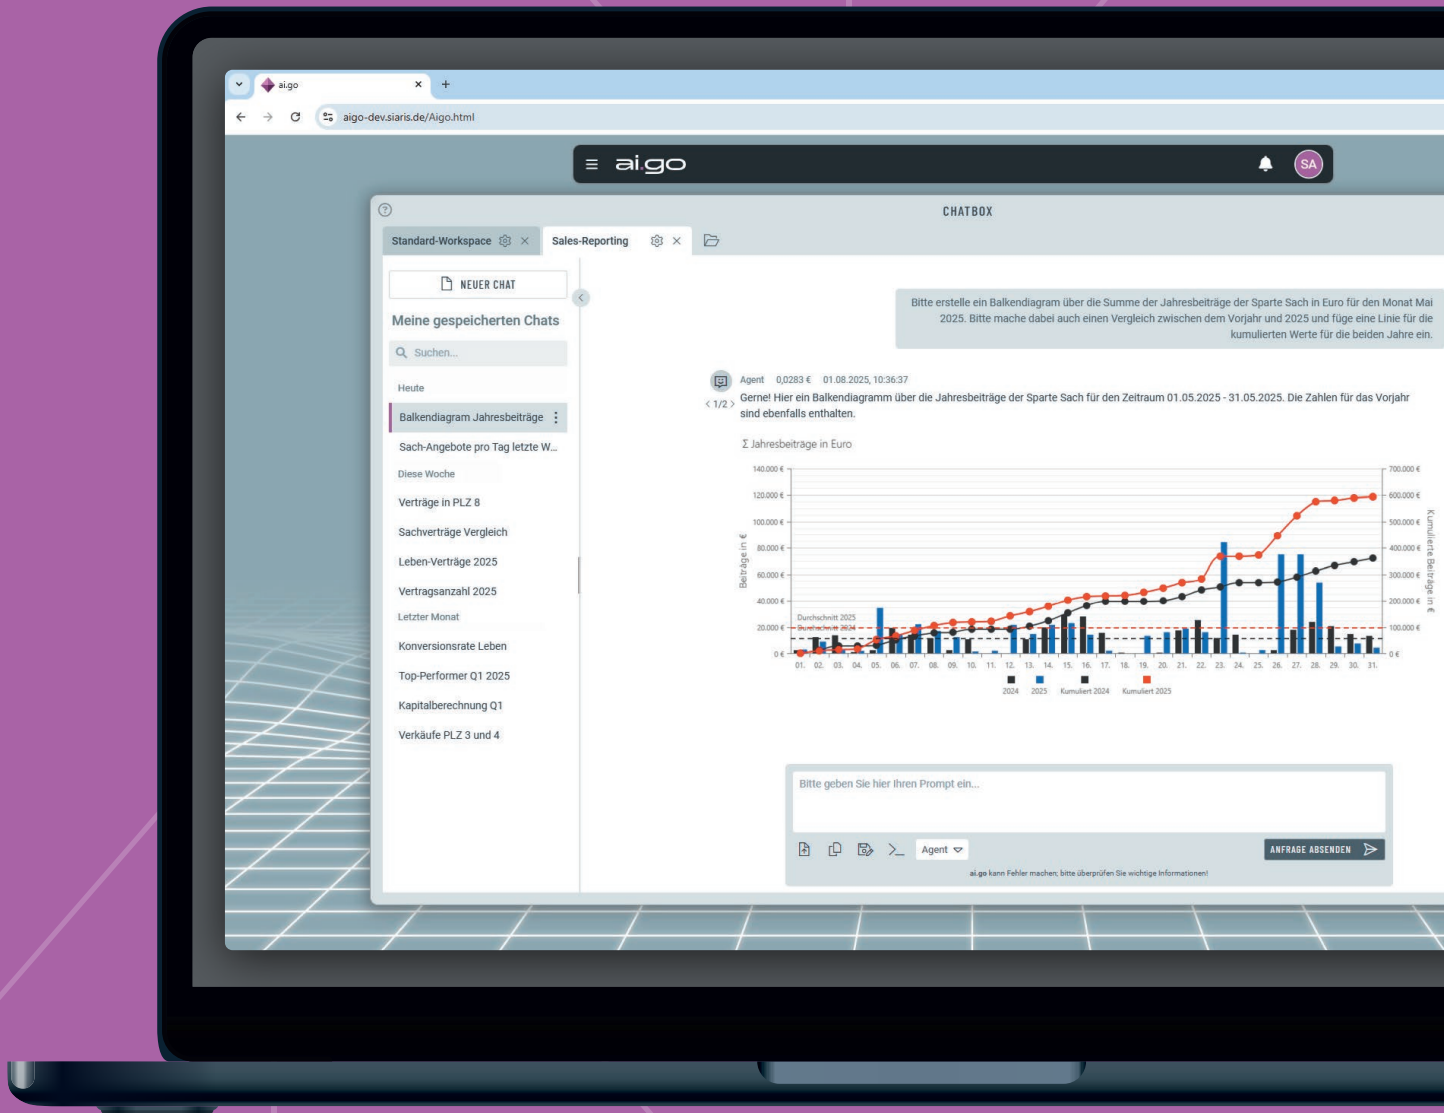

Boost efficiency.

Free your resources.

Turn knowledge into action.

With *ai.go*

# All the Expertise — Research, Analysis, IT and Automation — United in One Team

## Instant Answers. No More Searching: Your Company's Central Knowledge Hub

In most organizations, knowledge is scattered — across emails, folders, wikis, databases, and archives. The result?

- ✦ Information is hard to find
- ✦ Employees waste time searching or interrupting colleagues
- ✦ New hires struggle, while experienced staff get slowed down

With *ai.go*, that changes. It becomes the first stop for every information request in your company. Through an intuitive chat interface, employees get the right answers instantly — no long searches, no support tickets.

One simple chat is all it takes to:

- ✦ Find vacation request forms, meeting notes, or project templates instantly
- ✦ Access internal extensions, password instructions, and support FAQs on the spot
- ✦ Locate all relevant files on any topic in seconds

**The result:** Faster information flow, less strain on support, smoother onboarding, and a more productive work environment.

## Connect Knowledge. Reveal Hidden Insights

Data silos are roadblocks holding modern businesses back from their full potential. Information in databases, archives, emails, Excel sheets, ticket systems, or reports stays fragmented. Decisions are made with incomplete information.

*ai.go* breaks those silos. It links and interprets content from multiple internal and external sources — revealing connections that were previously invisible.

Your team gets answers to questions like:

- ✦ What lessons learned exist for Client X in project documents and support tickets?
- ✦ Which product features show up most often in customer feedback?
- ✦ Which external trends correlate with internal sales figures?
- ✦ What risks have occurred in the past, and which countermeasures worked best?

**The result:** Better decisions, backed by a more complete information base and a deeper understanding of internal processes.

## From Idea to App — No IT Skills Required

How often does a good idea stall because there's no capacity to implement it?

Small, time-saving tools or routines for efficient data analysis and visualization often go unrealized — either due to limited IT resources or a lack of coding skills in the business team.

With *ai.go*, employees become solution creators. Through chat, they can build apps — no code required. *ai.go* supports them in concept and execution, handling all the technical work in the background.

*ai.go* turns your staff into Citizen Developers:

- ◆ Dashboards for sales data that update automatically from Excel and send alerts
- ◆ Tools that extract and prioritize topics from customer emails
- ◆ Analysis and visualization tools for large-scale data sets

Everything happens directly in chat, step by step — guided by *ai.go* — without writing a single line of code. Ideas turn into fully functional tools — fast, simple, and directly from the business unit.

**The result:** You bypass the IT bottleneck by enabling employees to build solutions themselves — without programming knowledge. IT gets relief, projects move faster, and your company stays innovative and agile despite the tech talent shortage.

## Automate Routine Work — Focus on What Creates Value

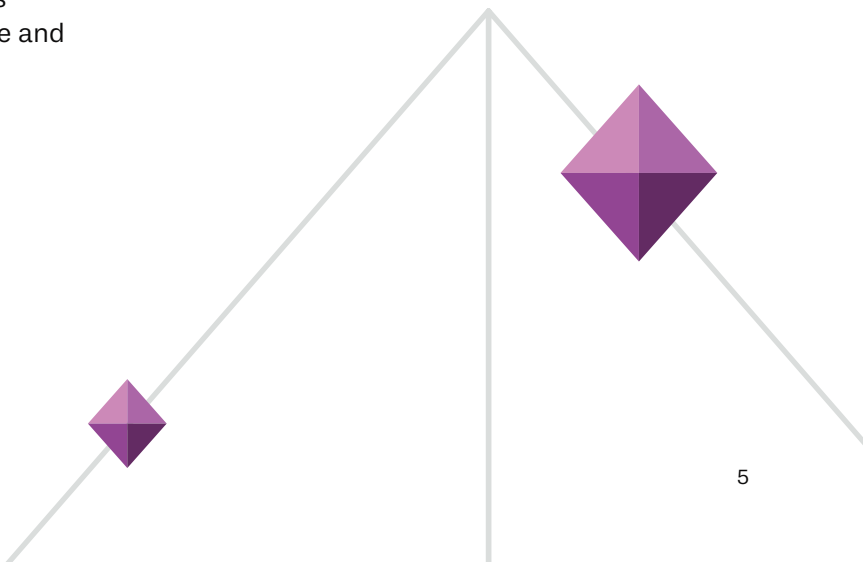

Employees spend countless hours on repetitive tasks — from report generation to form processing. This ties up resources that could create far more value elsewhere.

*ai.go* takes over repetitive work — reliably and automatically. That means more time for creative, strategic, and high-value activities.

Typical automations include:

- ◆ Weekly summaries of emails, tasks, or reports
- ◆ Automated collection and distribution of key metrics
- ◆ Alerts for specific events (e.g., budget overruns, system outages)

**The result:** Immediate productivity gains through automation. Your employees gain valuable hours for innovation and strategy, while your business gains speed and competitiveness.

# Maximum Security

## — Complete Data Sovereignty

Trust starts with data protection and sovereignty.

Many AI products come from abroad or run on servers and use models where data can leak. Even systems hosted within the European Union can pose legal uncertainties — due to ownership structures or model training that uses customer data.

*ai.go* is different.

It's a German-engineered, fully compliant solution by *siaris* GmbH, operated in a certified data center within the EU — with servers located in a secure, restricted-access area of a German company.

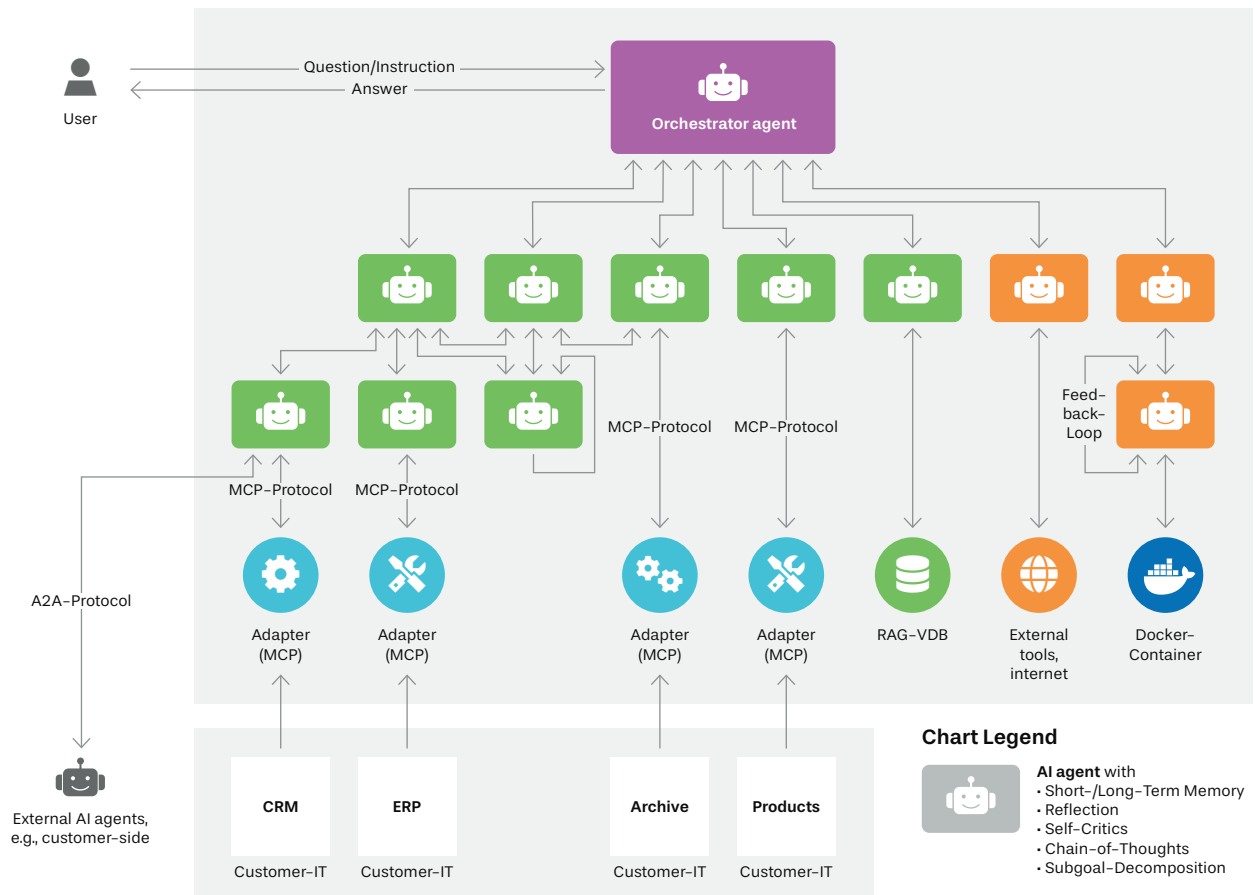

The AI models run exclusively on German-owned servers, hosted entirely within the regional and legal boundaries of the EU. And with the right hardware in place, *ai.go* can even be installed on-premises — giving you full operational control.

### Your Advantages

- ◆ No data leakage — No data sharing, no use for model training
- ◆ You choose which models are used
- ◆ Local data processing via data adapters — your data never leaves your company
- ◆ Encrypted access and storage with full system control

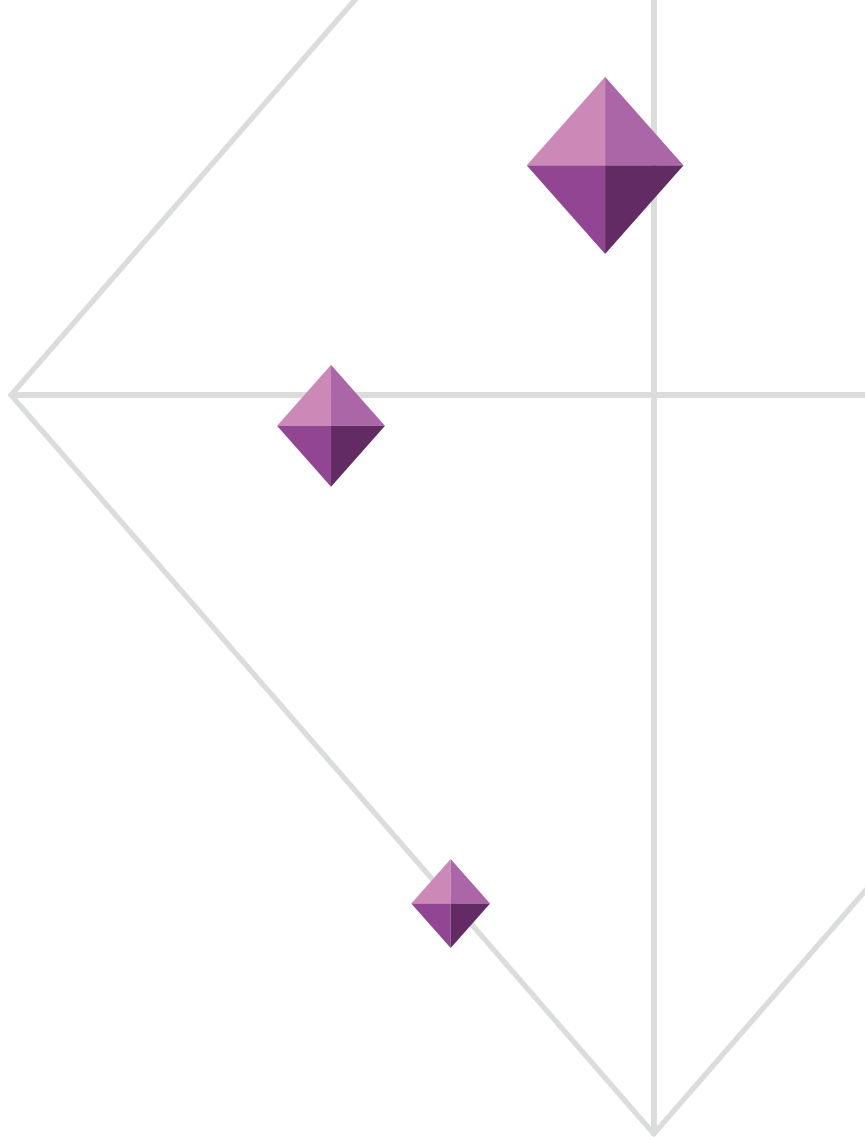

Maximum security. Full transparency. Legally compliant data processing.

Perfect for sensitive corporate information, *ai.go* keeps your business data fully protected — while ensuring you meet every regulatory requirement effortlessly.
